

Extend staff safety beyond hospital walls.

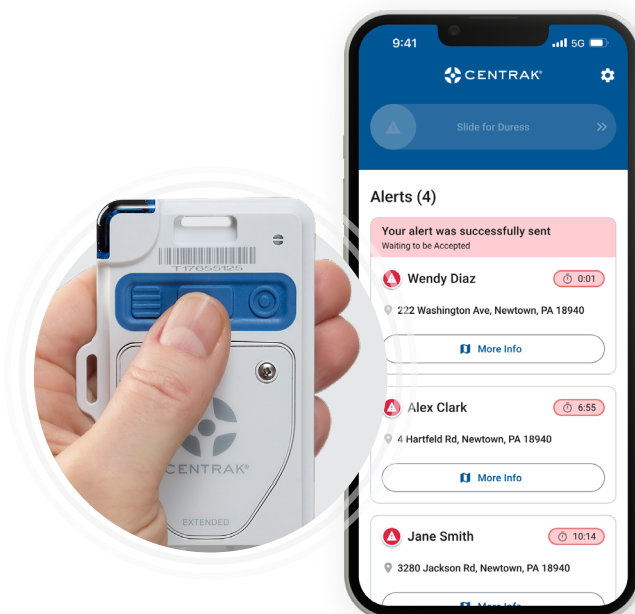

Protection Wherever the Job Takes You

Healthcare workers face safety risks across the continuum of care, from patient areas and parking facilities to outpatient clinics, community settings, and home health environments. As care delivery continues to move beyond traditional facility boundaries, organizations need staff safety solutions that can adapt to where care teams work. Available on iOS and Android devices, Duress^{RT} Mobile extends the protection of CenTrak's staff safety capabilities to all approved indoor and outdoor coverage areas, enabling caregivers to discreetly request assistance while providing responders with real-time location information that helps them identify, coordinate, and respond to incidents more quickly.

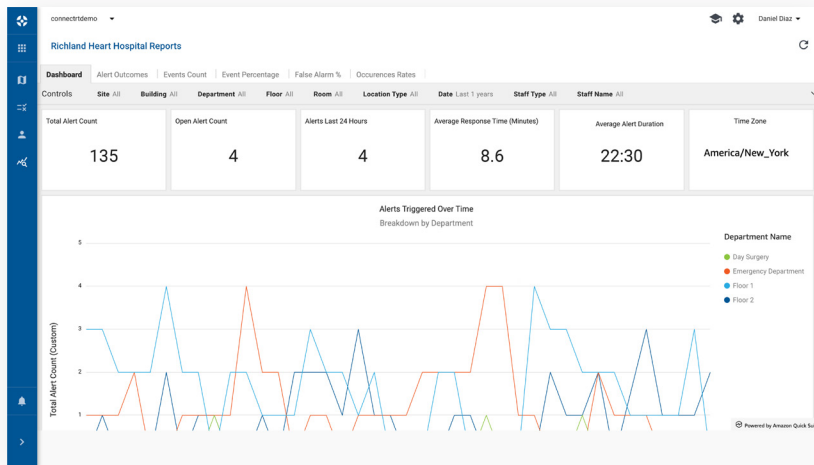

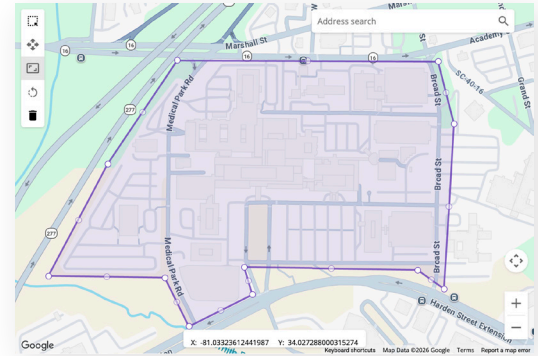

Safety Always Within Arm's Reach

Staff can activate a duress alert using either their BLE Multi-Mode Staff Badge or the Duress^{RT} Mobile application. Alerts are immediately routed to designated responders, who can view location information through a live map and coordinate response activity directly from their mobile devices. This helps teams quickly understand where assistance is needed and act according to established safety protocols.

Protection Exactly Where and When It's Needed

Duress^{RT} Mobile gives organizations greater control over how mobile staff safety protection is deployed. Configurable geofencing, time-based protection, and GPS location visibility allow organizations to define where and when mobile duress alerting is active, supporting caregivers across parking areas, outpatient facilities, satellite clinics, community settings, and home health environments. This targeted approach helps ensure support is available where it is needed while reducing unnecessary alerts and respecting staff privacy.

Turn Safety Events Into Actionable Insights

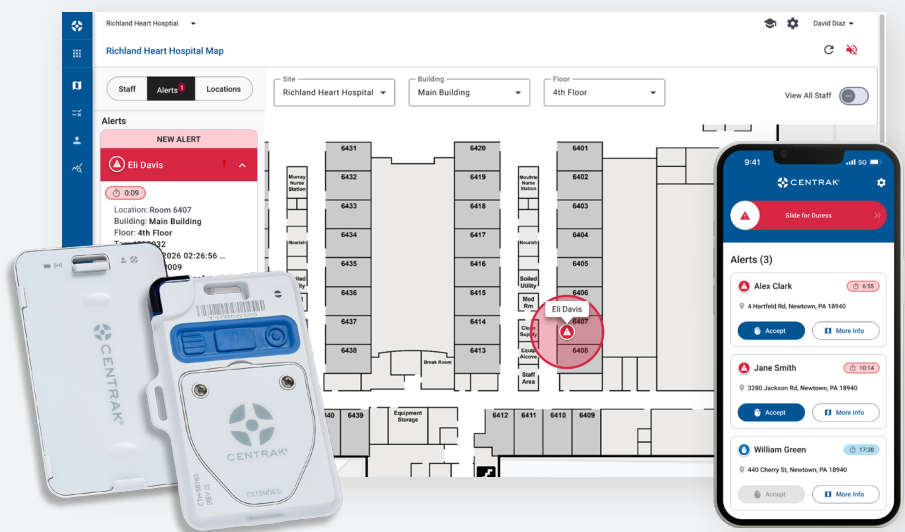

Activities initiated and managed through Duress^{RT} Mobile are automatically captured within the Duress^{RT} reporting and event management platform. From button presses and responder acknowledgements to status updates and incident notes, organizations maintain a complete record of each event to evaluate response effectiveness, support compliance initiatives, identify trends, and continuously improve staff safety programs.

A Complete Staff Safety Solution

Duress^{RT} Mobile works with CenTrak's Duress^{RT} platform and BLE Multi-Mode Staff Badge to support mobile alert activation, responder visibility, and event reporting as part of a connected staff safety workflow.

Requirements

- Duress^{RT} platform
- BLE Multi-Mode Staff Badge
- Duress^{RT} Mobile application
