

Prevent infection and protect patients with the ultimate visibility platform.

CenTrak's Enterprise Location Services™ enable real-time tracking and security of medical equipment, staff and patients. The improved visibility provides the means for healthcare facilities to prevent the spread of infection, increase patient safety and receive immediate contamination alerts. Our best-in-class monitoring solution also provides a cost-effective way to automatically capture compliance and noncompliance events 24/7.

Patient Tracking

Asset Management

Medical Scope Management

Hand Hygiene Compliance

Environmental Monitoring

Surgical Sterile Processing

Hand Hygiene Compliance

- Dispensers with integrated sensors from major manufacturers
- Personal, yet gentle, reminders to staff to encourage compliance in real-time
- Staff badges communicate with dispensers to automatically collect hand washing compliance data

Integrated dispensers monitor caregivers' compliance with hand washing

Preventing OR Infection Risk

Track and Manage Surgical Trays

- Track soiled surgical trays and utensils by location and their point in the sterilization process
- Staff receives an instant alert if a tray misses a stage in the sterilization process

Improve Patient Safety

- Ensure proper air differentiation to prevent airborne illnesses and infections
- Receive immediate alerts of air pressure and ventilation system failure

Patient Tracking

- Track patient interactions with other patients, clinical staff and facility equipment
- Automatic contact tracing can help ensure facilities are meeting CDC infection control recommendations
- Isolate those with possible infection risk
- Improve patient safety with low cost, fully waterproof and disposable single-use tags designed to operate for 31 days

Environmental Monitoring

- Ensure that essential assets like blood, vaccines, lab samples and organs are stored and maintained at regulation temperatures
- Automate 24/7 monitoring of air pressure to reduce the risk of airborne infections and illnesses
- Improve patient safety with real-time alerts when air pressure measurements are sensed above or below set parameters

Medical Scope Management

- Real-time medical scope tracking throughout their usage, cleaning and storage life cycles
- Avoid unnecessary reprocessing and medical scope damage
- Prevent the spread of bacterial infections due to bioburden

Asset Management

- Track equipment-to-patient interactions
- Distinguish which assets are clean and which are soiled
- Automate infection risk alerts
- Maximize Workflow
