

CenTrak's Security Solutions suite uniquely combines the industry's most accurate Real-Time Location System (RTLS) with a proven patient security system. The platform is fully integrated with easy-to-use, advanced and highly reliable software packages. Management and maintenance of this solution is simple and intuitive, yet highly sophisticated, with advanced settings making it attractive and approachable for all types of users.

CenTrak's versatile platform provides clinical-grade security for patients of all ages.

Future-proof platform

One tag for room-level locating, wander management and access control

Security Solutions Offerings

Infant Security

Protect your most precious assets.

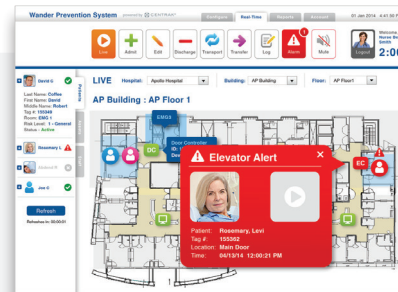

CenTrak's Security Solutions suite utilizes easy-to-use software applications that enable clinical staff to spend less time managing a security system and more time focusing on what matters most — caring for their most vulnerable patients. Each infant is protected by wearing a small, comfortable and unobtrusive tag which actively communicates with the system and supports bassinet-level location visibility. Workstations display floor plans of the facility, showing monitored areas and protected exits. Should an unauthorized attempt to leave the monitored area with a protected infant occur, the CenTrak system will immediately set off an alarm, capture video image, activate door locks and even hold selected elevators.

Peace of Mind

CenTrak's platform enables facilities to ensure mothers and families peace of mind that their baby is protected and always properly matched with mom.

newmom™ Tag

Advanced yet simple to use applications provide facility-wide patient, asset and staff visibility

Elopement, Wander Management

Ensure facility safety with the ultimate security & location platform.

Pediatric Security

Ensure the safety of younger patients while giving them the freedom to interact with their peers on the floor. The system is programmable to allow pediatric patients to access common areas while other exits are secured.

Tamper-Resistant Tags— if a tag stops communicating with the system or a tamper event occurs, the system generates an alarm, displays an alert on the application workstation and logs the event in the system's database.

newbaby Umbilical Tag

Long-Term Care Resident Security

Empower residents with a feeling of control and freedom while ensuring their safety. Residents can pass through designated access points (e.g. to reach a common area), while others remain secured and protected within different areas.

Acute Care Wander Management

Protect patients from accessing restricted areas while allowing access to common areas. Patients can reach communal space, while remaining secured and protected from wandering to restricted areas.

Asset Security

Track, manage and protect valuable mobile medical equipment through the use of the Security Solutions platform. By attaching small asset tags to vulnerable equipment, facilities are able to significantly reduce shrinkage and improve utilization for significant ROI.

Multi-Mode Asset Tag

Staff Duress & Panic Alerting

Protect staff with the industry's only clinical-grade wireless security solution.

CenTrak's Staff Duress and Panic Alerting products rely on active-RFID safety, security and visibility technology enabling immediate response times during emergencies by instantly locating the specific employee under duress. Alerts are initiated by a simple button-press, pull-cord, pendant pull or fall detection – depending upon the form factor chosen that best fits the facility's needs.

Staff Locating & Safety

Each staff member is provided with a CenTrak active-RFID, RTLS badge featuring wireless call functionality. In the event a staff member is in need of assistance or is faced with a threatening situation, CenTrak offers wearable and wall-mounted devices that will discreetly summon help via the CenTrak wireless network.

Different alarm activation options – provide staff members with peace of mind knowing that they are always protected.

Temperature & Environmental Monitoring

Meet compliance standards and prevent product loss with the same clinical-grade infrastructure for temperature and environmental monitoring. CenTrak's Environmental Monitoring Solutions allow you to record and track temperature and condition data of mission critical medicines, vaccines, blood and lab samples to ensure all are safe and ready for patient use.

Environmental Display Sensor

Infection Control & Hand Hygiene Compliance Monitoring

Protect your entire facility with the best-in-class infection control and prevention technology. The same clinical-grade infrastructure may be leveraged for advanced applications – both hand hygiene compliance monitoring and automated contact tracing. Support recommended CDC infection control recommendations and World Health Organization's guidelines for hand hygiene compliance to protect patients, staff and visitors.

CenTrak Security Solutions also integrates easily with other security and access control systems your facility may already have in place, such as card access, video surveillance, public address systems and pagers. This suite is part of CenTrak's visibility platform which includes a wide range of tags for patients, staff, assets and environmental monitoring – all leveraging the same infrastructure.
