

Rental asset workflow automation from receipt to return

Healthcare facilities are often challenged with effectively managing the processes and costs associated with the use of specialty rental assets. CenTrak's enterprise asset management software offers a purpose-built rental workflow module specifically designed to automate the intake and return process for all rental equipment. Knowing where the equipment is located and more importantly, knowing when they are scheduled to be returned, empowers hospital staff to proactively manage the rental process and avoid excess rental charges post patient use. This add-on feature is available today and can be deployed to your CenTrak Activate application quickly and efficiently.

Ineffective management of rental equipment often leads to hundreds of thousands of dollars in avoidable expense. With the rental module enabled, we commonly see clients cut their rental costs by more than 75%!

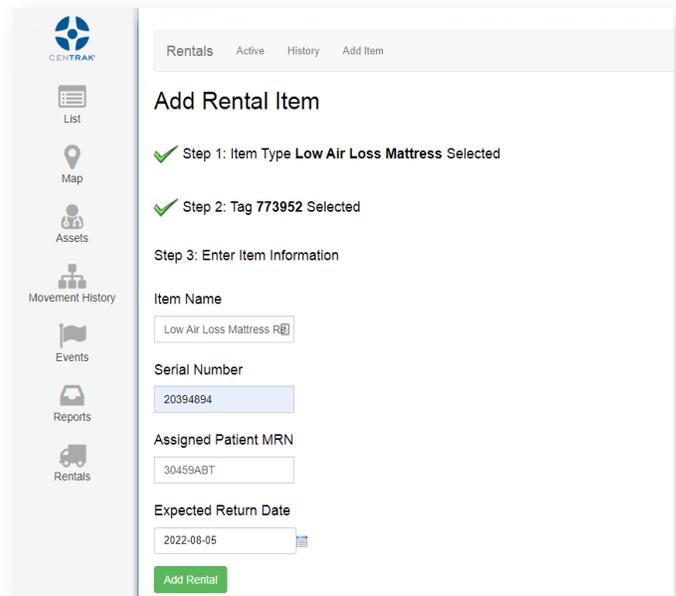

How it Works

When a rental piece of equipment arrives at the hospital, it gets added to the Activate Rental Module with a temporary RTLS tag and relevant information about the asset; device type, serial # and even the patient MRN it was ordered for, along with its estimated return date. The rentals dashboard will take care of the rest. Rental assets are easily tracked and managed and as estimated return dates approach, designated recipients receive automated notifications to check on the status of each, thus ensuring rental assets do not remain on site after their intended use has ended. The rental module works great for specialty beds and surfaces, wound-vacs, respiratory therapy equipment and so much more!

What You Need to Get Started

Once CenTrak completes a current state workflow analysis of the rental process at your facility, we will enable and configure the rental module to go to work on your behalf. Enabling it can be done in under 1 week, including staff training.

The screenshot shows the 'Add Rental Item' form in the CenTrak interface. The form is titled 'Add Rental Item' and has a sidebar with navigation icons for List, Map, Assets, Movement History, Events, Reports, and Rentals. The form itself has tabs for 'Rentals', 'Active', 'History', and 'Add Item'. It shows a three-step process: Step 1: Item Type 'Low Air Loss Mattress' Selected; Step 2: Tag '773952' Selected; Step 3: Enter Item Information. The 'Enter Item Information' section includes fields for 'Item Name' (Low Air Loss Mattress R), 'Serial Number' (20394894), 'Assigned Patient MRN' (30459ABT), and 'Expected Return Date' (2022-08-05). A green 'Add Rental' button is at the bottom.
