

CenTrak's Sustainability Vision

At CenTrak, we are committed to sustainability.

Our mission is to rigorously assess our processes and products, drawing on the expertise of our cross-functional team to foster a sustainability-driven culture.

Our goals focus on waste reduction, enhancing product recycling efforts, decreasing energy usage, and minimizing our carbon footprint to safeguard the environment.

Current Sustainability Initiatives

Scope 1 & 2 - Fuels and Electricity

FY24 Goal: Achieve 100% Renewable Electricity

- ✓ Upgrade all lighting in CenTrak offices to energy-efficient LED fixtures and secure Renewable Energy Certificates to demonstrate our commitment to sustainability and clean energy. These efforts help meet compliance standards and increase the use of renewable energy, reducing reliance on non-renewable sources.

Scope 3 - Supply Chain Emissions and Sustainable Design

FY25 Goal: Develop a Comprehensive Supply Chain Improvement Plan

- Introduce a Supplier Sustainability Code with clear minimum standards.
- Collect basic Environmental & Social (E&S) performance data from top suppliers.

FY26 Goal: Expand Supplier Sustainability Standards

- Extend the Supplier Sustainability Code and minimum expectations to key suppliers and tenders.

Exploring New Sustainability Initiatives

Sustainable Design

Embedding environmental and social considerations into our product and packaging design is a vital strategy for reducing Scope 3 emissions and minimizing broader environmental and social impacts.

Hardware Recycling

Asset Recovery - CenTrak purchases unwanted equipment from our clients, contributing to the reduction of industrial waste and promoting a circular economy.

Advanced Exchange Program - Options to exchange an existing comparable system for a new CenTrak replacement, providing both sustainability and cost-savings benefits.
